SUMMARY

Software engineer with 4+ years of experience building backend services and data pipelines for B2B SaaS. Strong in Python, Go, and AWS. Most proud of cutting a billing-system batch job from 11 hours to 38 minutes and shipping a customer-facing analytics API used by 200+ enterprise customers.

EXPERIENCE

Senior Software Engineer

Aug 2023 — Present

Loomline (Series B SaaS, supply-chain analytics) · Boston, MA

- Led migration of the billing reconciliation pipeline from monolithic Python cron to a Temporal workflow on Go; cut wall-clock time from 11h to 38min and eliminated weekly on-call pages
- Designed and shipped v2 of the public analytics API (REST + Kafka webhooks) currently used by 200+ enterprise customers; mentored 2 engineers through the build
- Owns Postgres performance: introduced pg_stat_statements review cadence, killed 4 N+1 queries each cutting p95 latency by 30%+
- Tech lead for the "data accuracy" squad — weekly RCA reviews, on-call rotation owner

Software Engineer

Jul 2021 — Aug 2023

Loomline · Boston, MA

- Built the original event-ingestion service in Python/FastAPI processing 40M events/day from Shopify, NetSuite, and SAP webhooks
- Migrated batch ETL from Airflow to dbt + Snowflake; reduced model count from 180 to 95 while improving freshness from daily to hourly
- Authored the company's first SOC 2 audit-trail service (Go, Postgres) and wrote the technical sections of the SOC 2 Type II report

Software Engineering Intern

May 2020 — Aug 2020

Wayfair · Boston, MA

- Built an internal A/B test config dashboard (React + GraphQL) replacing a JIRA-ticket workflow used by ~40 PMs

EDUCATION

Northeastern University — BS, Computer Science

May 2021

GPA: 3.78 · Magna Cum Laude

- Concentration in Software Engineering · Minor in Mathematics
- Honors thesis: "Differential testing for SQL query optimizers" — advised by Prof. K. Salem; presented at undergraduate research symposium
- TA: Object-Oriented Design (2 semesters), Algorithms (1 semester)

OPEN SOURCE & PROJECTS

- **pgnap** (Go, 1.2k GitHub stars) — CLI for snapshotting and restoring Postgres schemas; used in our CI
- Contributor to **dbt-core**: 6 merged PRs around incremental model performance
- Talk: "Killing the 11-hour cron" — Boston Python meetup, March 2025

SKILLS

Languages	Python, Go, TypeScript, SQL, Java (rusty)
Backend	FastAPI, Gin, Temporal, gRPC, REST, Kafka, RabbitMQ
Data	Postgres (deep), Snowflake, dbt, Airflow, ClickHouse (basic)
Infra	AWS (ECS, RDS, S3, Lambda), Terraform, Docker, GitHub Actions, Datadog
